Pretinopathic diabetes

Claim 9; Page 55-60; 90pp; English.

Chis sequence represents a full-length nucleotide sequence that codes for human E2A binding protein (E2A-BP, see W35816). It was isolated from a human aortic RNA following 3 rounds of 5'RACE procedures. E2A-BP is expressed in vascular smooth muscle cells; mRNA is preferentially expressed in vascular smooth muscle cells; mRNA is proteins in vivo, binds to both E12 and E47 and inhibits binding of E47 homodimer to an E-box probe (see T97606). Mouse (see T97611) and rat (see T97612-13) E2A-BP sequences have also been isolated. E2A-BP nucleic acids may be used in gene therapy and antisense methods for treating vascular diseases such as arteriosclerosis, to produce transgenic or knock-out animals, as well as in methods of producing E2A-BP polypeptides that can be used therapeutically to promote vascular smooth muscle cell growth

                                                                                                                                                                                                                                                                e.g. for wound healing, or to screen for modulator compounds useful e.g. for the treatment of arteriosclerosis and anglogenesis. The E2A-BP gene promoter can be used in gene therapy methods to direct vascular smooth muscle cell-specific expression of the E2A-BP gene, antisense sequences or heterologous genes.

PT cyclic di:guanosine mono:phosphate degradation enzymes e.g.
PT cyclic di:guanosine mono:phosphate dispersor trange, mobilisable cosmid pNT2300S5. The average insert size was ca.
CC agene bank of Acetobacter 1306-11 was constructed in the broad host crange, mobilisable cosmid pNT230CS5. The average insert size was ca.
CC Golb. The bank was screened with a 53bp PCR amplified grobe whose cyclase encoding gene. Three unique cosmid classes were identified CC corresponding to three different cdg operons. The cdg3 operon comprises at least 2 genes. Manipulating the expression levels of che different cdg3 genes is contemplated, particularly in cellulose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              13-OCT-1993 (first entry)
Acetobacter cdg3 operon.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PT Erysiphe graminis, etc. in plants

PS Claim 3; Page 25; 36pp; English.

CA clone encoding PR protein P14a (see Q31652) was isolated from a CC CDNA library established from infected tomato plants. The 11brary was screened for P14 genes using a probe (Q31657) based on CC the known P14 sequence (EMBO Journal, vol.4. #11, 2745-2749, 1985). The P14a clone was then used as a probe to screen a genomic library CC for other members of the P14 family. An overall total of 6 genes were identified, of which 5 are located in a 50kb stretch in the CC tomato genome, one of the genes appearing to be a pseudogene. The P14e protein is very similar to the P14a protein though has a CC stretch of 9 amino acids (residues 127 to 135) deleted from its CC-terminal and the last 2 C-terminal amino acids (residues 125 and C 126) substituted with respect to P14a. This gives a homology of 90% between the P14a and P14e mature proteins.

for treating fungal infection of e.g. Uromyces appendiculatus, PT Erysiphe graminis, etc. in plants

PS Claim 3; Page 22; 36pp; English.

CC A cDNA library was established from infected tomato plants. The CC library was screened for P14 genes using a probe (Q31657) based on CC the known P14 sequence (EMBO Journal, vol.4. #11, 2745-2749, 1985).

CC A positive clone containing an ORF of 480bp was isolated and CC sequenced. It was found to encode P14a, a 159 amino acid protein CC differing from the previously published P14 protein by 5 additional CC maino acids (at AA positions 99-103, inclusive). The P14a cDNA was CC used to screen a genomic library for other members of the P14 CC family, P14a has fungicidal activity and can be used to combat rust CC see Q31652-Q31660.

```
Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score

Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions. 7

bin/display?db-wormace&class-Sequence &object=Y17G7B
Current sequence finishing criteria for the C. elegans genome
sequencing consortium are that all bases are either sequenced
unambiguously on both strands, or on a single strand with both a
dye primer and dye terminator reaction, from distinct subclones.
Exceptions are indicated by an explicit note.
Exceptions are indicated by an explicit note entire insert of
the Specified clone. It may be shorter because we only sequence
overlapping sections once, or longer because we arrange for a small
overlap between neighbouring submissions.
It may be shorter because we only sequence overlapping sections
once, or longer because we arrange for a small overlap between
neighbouring submissions.

FEATURES

Exon/Intron boundaries of identified were canonical splice junctions that across the splice junctions.

genes were maintained

chosen if there sequence continuity

Location/Qualifiers /organism="Homo sapiens"

.144368

Sequence similarities were identified using Powerblast by Jinghui

The repeat regions shown were identified using RepeatMasker by
